Commercial Bath and Shower Enclosure Walls Commercial Bath and Shower ADA Bathing Systems

[Contact Us For Volume Pricing](#)

American Bath Industries manufactures and distributes a unique line of acrylic bath and shower enclosure walls and ADA approved bathing systems for; Apartments, Hotels, Condos, Assisted Living and many other commercial and residential new construction or building renovation requirements. If you are a commercial contractor or property owner currently bidding or have a large commercial bath or shower construction or renovation requirement, please consider American Bath Industries volume discount pricing for bath and shower enclosure walls or ADA bathing systems.

For Commercial Bath and shower enclosure walls or systems, Look to American Bath Industries.

Here at American Bath Industries we understand the demand for large volumes of commercial and residential bath and shower enclosure wall systems. Our AmeriWall™ installation division here in Northern California (CA) installs over 300 of our AmeriWall™ bath and shower enclosures a month, in a combination of commercial and residential construction or building renovation applications. As a provider of bath and shower enclosures and accessories, we work with our own contracting division and a variety of contractors who are building or renovating: apartments, condominiums, hotels, motels, assisted living centers and other large-scale residential and commercial development projects.

American Bath Industries of Hayward California (CA) has a complete line of bath tub and shower pan enclosures and accessories including American Disability Act (ADA) compliant bath safety products. Our bath and shower enclosures provide one of the safest ADA Application bathing systems in the industry. American Bath Industries has a full line of AmeriWall™ bath and shower enclosures and AccessaBath™ bathing systems for most, commercial and residential installation applications. Our AmeriWall™ Bath or Shower Enclosure walls or systems are very competitively priced, look like real 4" mosaic tile with simulated grout lines and install in less than one hour over industry standard wall board. Since AmeriWall™ is manufactured from zero porosity acrylic material, it does not require the use of grout and/or attract the mold and mildew that usually accompany it.

American Bath Industries is here to fulfill all of your commercial bath and shower enclosure wall orders nationwide.

* AmeriWall™ enclosures and AccessaBath™ ADA compliant bath safety bathing systems, are not available at leading retail building material supply stores or construction materials distribution centers. AmeriWall™ and AccessaBath™ product lines are only available direct from American Bath Industries or through our select and growing distribution network.

[AmeriWall™ and ADA compliant AccessaBath™ Bath and Shower Safety Product's Specifications:](#)

Our AmeriWall™ and AccessaBath™ bath and shower enclosure walls are available in pre-fabricated acrylic kits, that consist of two (2) or three (3) walls, designed to be installed over industry standard wall board, bath tubs and shower pans. Each enclosure system is manufactured with an integrated soap dish and an interlocking channel system, that enhances the products overall rigidity and to prevent any possible water penetration after installation. Most AmeriWall™ enclosures are designed so the back wall can be trimmed to width, to fit most new construction or existing building renovation requirements. AmeriWall™ and AccessaBath™ offer a significant cost savings when compared to grouted tile, stone, glass, or the many other commercial grade bath or shower wall materials that are used in our construction or renovation industry today. In addition, AmeriWall™ or AccessaBath™ products can be cut or drilled, for immediate installation with most standard hand operated construction or building tools.

Property builders, renovators or owners obviously have limited budgets for their bath and shower enclosure construction or renovation requirements. American Bath Industries has a very attractive, durable and affordable solution to these ever present budget issues. American bath Industries, AmeriWall™ Bath and Shower Enclosures and AccessaBath™ Bathing Systems are so quick and easy to install, you will renovate commercial or residential bath and shower units faster and less expensive than ever before. Please contact our office to receive a free sample of our unique enclosure design and/or a quotation for your bath and shower wall, new construction or building renovation requirements.

Special Notice to Commercial and Residential Property Builders, Renovators or Owners:

Water is an environment that is tough to deal with in any bath or shower enclosure application. However, most moisture-related bath and shower problems are caused by lack of maintenance or a damaged enclosure system. Whether you own, operate, build or renovate commercial or residential property, one needs to keep their bath and shower enclosure repair or maintenance to a minimum. Constant vigilance is certainly a good way to prevent a potential problem, but it also frequently offers you the option to repair a problem rather than a need for total product replacement.

BATHROOM WINDOW KITS

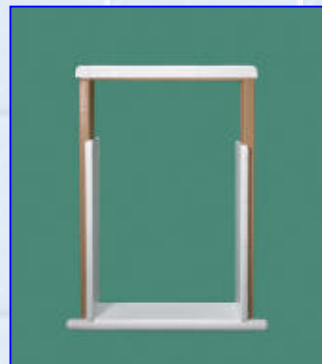

AmeriWall window kits are made up of three components consisting of a sill piece and two side pieces or panels. They are available in the following sizes and should correspond with the in-side width of the window frame: 16", 24" 32", 36", 48" and 60". The side pieces or panels of our window kit are 24" in length or height and are designed to be installed in conjunction with the sill piece and terminate at the same height of the AmeriWall enclosure that is installed.

The basic design of the AmeriWall window kits allow the sill and side pieces to be glued to a 2" minimum depth, relatively smooth surface window frame that has been exposed by completely removing that portion of AmeriWall around the window frame. Both the sill piece and side pieces of our window kits have a rounded bull nose, that extends over the parallel front surface of the edge of the window sill, sides and enclosure wall. Once the window kit is trimmed to fit the inside of the window frame, each piece is glued in place and the seams are completely caulked with same 100% silicone caulk that was used for the AmeriWall enclosure installation.

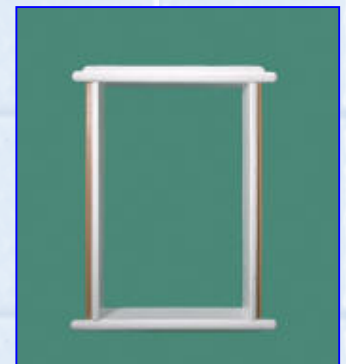

AmeriWall window kit side pieces or panels are typically installed "no higher" than the top of the installed AmeriWall enclosure. Therefore the top of the window frame should extend past the top of the AmeriWall enclosure. In addition, the sides of the window frame that will be covered should not be higher than the total 24" length or height of the side pieces or panels provided. If the enclosure extends past the top of the window frame, then a double window kit will be required to completely cover all four (4) sides of the window frame. **Click photos below to enlarge.**

Standard Single Window Kit - Not Mounted
